

**SYCHEM SURGICAL**

# **SURGICAL INSTRUMENT CATALOGUE**

**LEADING UK MANUFACTURER  
OF SURGICAL INSTRUMENTS**

## COMPANY PROFILE

Combining over 100 years of experience in the sterilisation industry with over 75 years of manufacturing surgical instruments, Sychem Surgical has positioned itself as leading specialists in the medical, healthcare, and laboratory sectors. Sychem Group was established in 2003, initially supporting a range of industries to reduce the spread of bacteria and viruses, and building a reputation over the years as leading suppliers of decontamination and sterilisation equipment. In 2023, Sychem Group acquired the surgical division of S Murray Ltd, a well established surgical instrument manufacturer based in Sheffield, UK, which has now become Sychem Surgical. S Murray have been manufacturing from their facility since 1946 and bring a wealth of experience and knowledge to our evergrowing team. The benefits of manufacturing in Sheffield include immediate access to raw materials, technical expertise and skilled personnel, for which the region is internationally recognised as a centre of excellence. Sales administration, warehousing and distribution are based at our offices in Sheffield, UK. Sychem Surgical plays an active role in the representation and development of British manufacturing on a national and international level through its membership of the Surgical Instruments Section of the Association of British Health-Care Industries (ABHI).

## THIS CATALOGUE

Instruments are listed alphabetically according to surgical procedure (see contents page v). They are also listed both by name and instrument type in the comprehensive cross-referenced index starting on page 237.

Line drawings have been used throughout to provide best possible clarity. There is an indication of the relative sizes of instruments shown on each page, but drawings are not to exact scale. Inset drawings of instrument tips are intended to show detail, only T/C needleholder tips are actual size.

Instructions for reprocessing reusable surgical instruments are given on page IV.

## GUARANTEE

The quality of all Sychem Surgical instruments is guaranteed to be free of defects in workmanship and materials. In the unlikely event that any item is found to be unsatisfactory in normal use it will be refurbished or replaced free of charge. This guarantee is firm for at least 10 years, except for replacement of T/C tips on needleholders and re-sharpening of hard edge scissors, which will be free of charge for 3 years.

## QUALITY

All Company personnel are committed to improve and enhance quality procedures at all levels of production, purchase and supply.

Sychem Surgical products are ISO13485 certified, assuring customers of continued professional service, and properly controlled quality of product.

Sychem Surgical will continue to maintain its approval to the latest revisions of all relevant quality standards, with copies of our current certificates of approval available upon request. Instruments of a special nature, which are not within the Company's manufacturing programme, originate only from manufacturers whose quality assurance procedures are thoroughly known to Sychem Surgical Ltd. The Company is also committed to the development of all employees through the principles of the Investors in People Standard.

Products in this catalogue (except for diathermy instruments and tracheostomy tubes, which are subject to notified body approval) are Class I Devices according to rule 6, annex IX of the Council Directive concerning Medical Devices (93/42/EEC) and they comply with all relevant essential requirements of that Directive.

Patterns defining the form of these instruments and procedures defining method of manufacture are maintained as part of the Company's quality system, with full traceability throughout every stage of the manufacturing process.

## INSTRUMENTS

Suitable for theatre, ward, veterinary, dental and chiropody use; manufactured from high grade stainless steel, all instruments comply with the specifications set by ISO 13485

Standard instruments are finished to a bright mirror polish; specialised instruments include Tungsten Carbide Needle holders – satin finished with gold plated bows; also Diathermy Forceps with distinctive blue insulation.

## SCISSORS

Manufactured by specialists, working to the same quality criteria as the company's instrument makers.

All scissors have bright mirror polish finish; Hard Edge Scissors have stellite blades and gold plated bows; Ultracut Scissors have serrated top blades to prevent tissue slippage and razor edged bottom blades to allow precise effortless cutting.

## SERVICE

Comprehensive catalogues are available in book and CD ROM formats to support both U.K. and overseas distributors.

Large stocks held in Woking and part finished components at Sheffield allow best possible delivery times. Visitors are welcome at the Sheffield factory to experience the company's commitment to quality throughout the manufacturing process.

# INSTRUCTIONS FOR RE-PROCESSING REUSABLE DEVICES

The following instructions are for all reusable medical devices shown in this catalogue, unless stated otherwise with the packaging of the product. These instructions are intended for use only by persons with the required specialist knowledge and training.

## WARNINGS

- Follow instructions and warnings as issued by manufacturers of any decontaminants, disinfectants and cleaning agents used. Wherever possible avoid use of mineral acids and harsh, abrasive agents.
- No part of the process shall exceed 140°C.
- Aluminium based products are damaged by high alkaline solutions (pH >10).
- Devices with long, narrow cannula, hinges and blind holes require particular attention during cleaning.

## Limitations on Reprocessing

- Repeated processing has minimal effect on these instruments.
- End of life is normally determined by wear and damage in use.
- Any specific limitations on the number of reprocessing cycles shall be made available with the instrument.

## INSTRUCTIONS

### From Point of Use

- If possible, soiled instruments should be placed in a holding solution (combined disinfectant / enzyme solution) immediately after use and prior to cleaning, avoiding the use of bleach-based solutions.

**Note:** *this process is not suitable for aluminium instruments.*

### Preparation for Decontamination

- Disassemble where intended by trained staff only, without the use of tools unless specifically provided by the manufacturer.
- Reprocess all instruments as soon as it is reasonably practical following use.

### Cleaning: Automated

- **Use only either CE marked or validated washer-disinfector machines and cleaning agents, following the manufacturers' instructions for use, warnings and recommended cycles.\***
- Load instruments carefully, with any box joints and hinges open and so that any fenestrations in instruments can drain.
- Place heavy instruments with care in the bottom of containers.
- Place instruments with concave surfaces (e.g. curettes) facing down to prevent pooling of water.

### Cleaning: Manual

- **Manual cleaning is not advised if an automatic washer-disinfector is available. If this equipment is not available, use the following process:** -

**One:** Using a sink dedicated for instrument cleaning (not used for hand washing), rinse excess soil from instrument (water temp <35°C).

**Two:** Keeping the instrument submerged in the water, with a brush, apply CE marked cleaning solution to all surfaces. Pay particular attention to serrations, teeth, ratchets and hinges, always brushing away from the body. Ensure rongeurs and hinged instruments are thoroughly cleaned in both open and closed positions.

**Three:** Rinse instruments thoroughly with clean water, so that the water reaches all parts of the instrument, then carefully hand dry or use an industrial drying cabinet.

**Note:** *when manual cleaning is used it may not be possible to disinfect the device prior to further handling.*

### Cleaning: Inspection

- After cleaning, check all surfaces, cannulations, holes and lumens for complete removal of soil.
- If any soil is still visible, return the instrument for repeat decontamination.

**Note:** *automated cleaning may not be suitable for all lumens and cannulae, in which case clean manually with an appropriate brush (and stilette if provided) that reaches the depth of the feature.*

### Maintenance

- Apply surgical grade lubrication oil to hinges, joints and moving parts as per the lubrication oil manufacturer's instructions.

### Inspection and Function Testing

- Visually inspect and check:-
  - all instruments for damage and wear
  - cutting edges are free of nicks and present a continuous edge
  - jaws and teeth align correctly
  - all articulated instruments have a smooth movement without excess play
  - locking mechanisms (such as ratchets) fasten securely and close easily
  - long, slender instruments are not distorted
  - any component parts fit and assemble correctly with mating components.

- Remove for repair or replacement any blunt, worn out, flaking, fractured or damaged instruments.

**Note:** *if an instrument is returned to the manufacturer / supplier, the instrument must be decontaminated and sterilised and be accompanied with the relevant documented evidence.*

### Packaging

- All instruments to be packed following local protocol in accordance to BS standards.

### Sterilisation

- **Either CE marked or validated vacuum autoclave operating at 134-137°C 2.25 bar for a minimum holding time of 3 minutes - always following the instructions of the machine manufacturer.**
- When sterilising multiple instruments in one autoclave cycle, ensure that the steriliser manufacturer's stated maximum load is not exceeded.
- Ensure instruments are dry before sterilisation. If the instruments cannot be dried prior to sterilisation, then use distilled/de-ionised water in the final-rinse stage of cleaning.

### Storage

- Ensure instruments are dry before storage, and stored in dry, clean conditions at an ambient room temperature and away from direct sunlight.

### Additional Information

- Other forms of **cleaning** (ultrasonic, alkaline and neutral) and **sterilisation** (Low Temperature Steam, Formaldehyde, Ethyleneoxide and Gas Plasma) are available. However, always follow the instructions for use as issued by the manufacturer and always consult with them if in any doubt over the suitability of any process used.

\* **Follow cleaning and sterilisation guidelines as per HTM 2010 and HTM 2030.**

It is the responsibility of the reprocessor to ensure that the reprocessing as actually performed using equipment, materials and personnel in the reprocessing facility achieve the desired result. This requires validation and routine monitoring of the process. Likewise any deviation by the reprocessor from the instructions provided must be properly evaluated for effectiveness and potential adverse consequences.

### NEEDLEHOLDERS, TUNGSTEN CARBIDE

The needleholders shown on pages 26-28 have jaws made from tungsten carbide, which is the hardest and longest lasting material used in surgical instruments. The configuration of the jaws gives the best possible grip, and the gold bows allow clear and positive identification in the operating theatre.

In the event of accidental damage, repairs can be made quickly and economically.

### HARD EDGE SCISSORS

The Hard Edge scissors shown on pages 50-52 are made from a special alloy which guarantees long life however frequently the scissors are used, together with a smooth accurate and consistent cutting action.

The extreme hardness results in less frequent sharpening and so minimises the time “out of service” from the operating theatre. (Should the scissors ever need sharpening it is recommended that they are only re-sharpened by the manufacturers who are familiar with the specialist techniques involved in the design.)

Gold plated finger rings allow clear and positive identification.

S Murray’s Hard Edge instruments all carry a minimum guarantee period of 3 years, subject to proper usage.

## SCISSORS, ULTRA-CUTTING

The Ultracut Scissors shown on pages 53 and 54 are designed to give an effortless cutting action through the full length of the blade.

The bottom blades are ground to a razor edge suitable for all materials from fine tissue to coarse bandages.

The serrated top blades prevent tissue slippage ensuring minimal damage.

A durable black coating on the handles allows easy recognition.

## SYCHEM SURGICAL

**Combining over 100 years of experience in the sterilisation industry with over 75 years of manufacturing surgical instruments, Sychem Surgical has positioned itself as leading specialists in the medical, healthcare, and laboratory sectors.**

In 2023, Sychem Surgical acquired the surgical division of S Murray Ltd, a well established surgical instrument manufacturer based in Sheffield, UK.

S Murray have been manufacturing from their facility since 1946 and bring a wealth of experience and knowledge to our ever-growing team.

We work with a number of partners and distributors across the world to enhance and bring to market our extensive product portfolio, whilst continuously expanding our reach. We are always open to new opportunities within the surgical sector and welcome routes into new markets and countries.
